Python Classes & Objects

Python Classes & Objects

Python Classes & Objects

- Python is an object-oriented programming language. Almost everything in Python is an object, with its properties and methods. A Class is like an object constructor, or a "blueprint" for creating objects.
- Lets take an example "Pen".
- Pen is object which has properties of pen type, pen color, pen size. And actions performed by this pen are called methods, like writing, drawing opening cap, closing cap, changing nib, refilling.

Creating Class

```
class MyClass:
   empid = 1001
   empname = "John"
```

Creating object for the class

```
obj1 = MyClass()
print(obj1.empid)
print(obj1.empname)
```

Python Modules

Python Modules

Modules

Python modules are .py files that consist of Python code. Any Python file can be referenced as a module.

- pre-build/In-build
- Custom/Own

Python Functions

Python Functions/Methods

Functions/Methods:

Python functions are written inside .py files which performs the instruction or action written in the form of Python code.

- Creating Function
- Calling Function
- Returning data from Function
- Calling function inside another function.
